Views

These sets of scala.html files all serve a very similar purpose. Each one of them is styling using the same css file to maintain similar website look. Apart from the design each one contains a form that all call to Application.addListing(), which would get the information from the forms and save them reverse routing through that method to get a GET post. All of these pages also gain from the javascript files that would parse the javascript already on the site to digest and produce information. Each of these pages contain their respective URI's to each other's pages making them easily accessible. The list of URI's are given as follows.

"/artHist"
"/biology"
"/chemistry"
"/cs"
"/english"
"/history"
"/math"
"/music"
"/socialsci"
"/post"
